

Start here: your billing account

Two accounts, one login

We use two websites:

Site	What it's for
suhosting.net , the billing site ("Client Dashboard")	Ordering servers, paying invoices, upgrades, cancelling, support tickets
panel.suhosting.net , the game panel	Running your server: console, files, mods, backups

Your **billing account** is the main one. When you order a server, we create your game panel account automatically, and you can sign in to the panel with **Login with Paymenter** using your billing login. For the game panel, see [Start here: a tour of the game panel](#).

Creating an account

1. Go to suhosting.net/register.
2. Enter your **first name**, **last name**, **email** and a **password** (at least 8 characters, with letters and numbers).
3. Click **Sign up**.
4. Check your email and click the verification link. Until you do, the dashboard asks you to "Verify your email address". No email? Click **Resend verification email** and check your spam folder.

You can also create an account at checkout: add a server to your cart first, and you'll be asked to sign in or register when you check out.

Signing in

Go to suhosting.net/login and enter your email and password, or click **Discord**.

Discord login only works for an existing account with the **same email** as your Discord account. It doesn't create a new account. If you see "*You are not registered on this site.*", register first with your Discord email address, then Discord login will work.

Forgot your password?

Click **Forgot your password?** on the login page, enter your email, and follow the link we send you.

Your dashboard

After signing in you'll see **Active Services**, **Unpaid Invoices** and **Open Tickets** at a glance. The menu on the left takes you to:

Menu	What's there
Services	Your servers: upgrade, change game, renew, cancel. See Managing your service .
Invoices	Bills and payments. See Paying invoices .
Tickets	Support. See Getting help: support tickets .
Account	Personal details, security, credit, payment methods, notifications, partner program, privacy

Keeping your account secure

Under **Account** → **Security** you can:

- **Change password.** This also logs out your other devices.
- See your **Sessions** (every browser signed in) and log any of them out.
- **Enable two-factor authentication:** scan the QR code with an app like Google Authenticator or Authy, then enter the 6-digit code.

Powered by Payment

The billing site doesn't give you recovery codes for two-factor. If you lose your phone, you'll need to contact support to get back in, so keep your authenticator app backed up.

Personal Details is where you change your name or email. Changing your email sends a new verification link. **Notifications** controls which emails and in-app alerts you get.
